

DETECTAMET SK119

Available in
Dark Blue

IMPORTANT: Read these guidelines before you begin to use your SK119 Knife.

The Knife is supplied with the blade locked in. See Blade Change image 1 below.

The SK119 is a utility knife with a novel new safety feature. Whereas an enclosed blade 'Safety Knife' almost eliminates the risk of an accident, the SK119 will give a risk reduction compared to a 'fixed blade' or 'manual retract' knife.

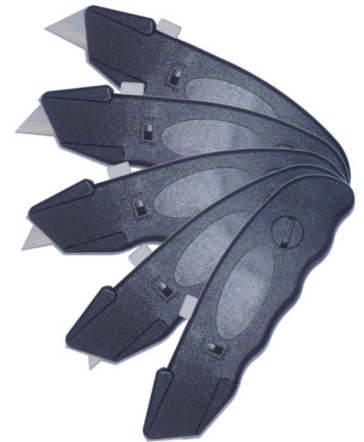

The Metal Detectable SK119 is moulded in a metal detectable plastic with stainless steel blades and components with an aluminium blade carrier.

Please test detectable products with YOUR detection equipment prior to use

KEY FEATURES

- Blade stays in the 'out' position whilst a controlled cut is being made, if the knife is jerked, shaken or dropped the blade will retract
- The blade can be locked in the knife for safe storage
(Note: The blade will retract if you push the lock button up when the blade is out. It will not lock the blade in the out position)!
- Moulded in tough glass filled nylon
- Easy blade change and cleaning procedure
- Standard (plastic blade carrier) and Heavy Duty (aluminium blade carrier) options available

BLADE CHANGE

1 <p>Ensure the switch is in the 'unlock' position</p>	2 <p>Turn the locking button a quarter turn to the left, the button will then pop up but will not lift out of the knife body</p>	3 <p>Slide top half of the knife body back</p>	
		4 <p>Reverse or replace the blades Ensure switch is in the lock position when knife is not in use</p>
